Open science workshop
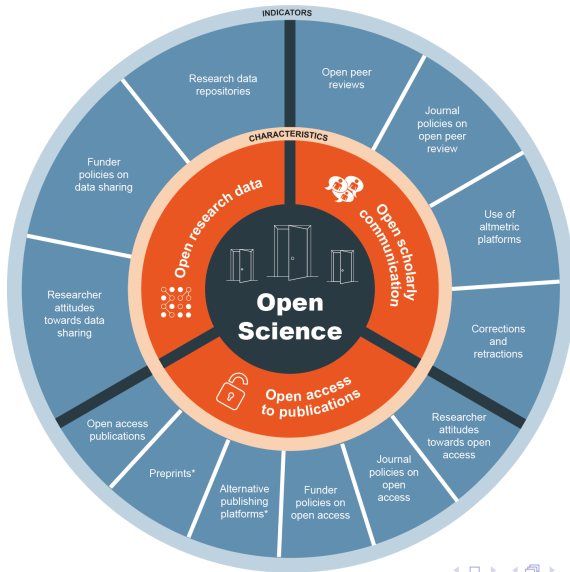

6 septembre 2019

Why talk about Open Science ?

EU - Open Science Monitor

What does open science mean for you ?

How do you put it into practice in your field ?

What can you do to improve our practices ?

Encourages reproducibility, new cooperations and robustness of methods

- Open Access Publication (important but alone does not change the world !)
- Open Data (lot of repositories available !)
- Open Code

Closing discussion

What would you like to see in the future in your fields? What do you

think will encourage these best practices?

Thank you.
